

EDITSXpress makes it possible for health plans and facilitated enrollers to submit Access NY application data and the required documentation electronically, directly into the NYC Human Resource Administration's EDITS system—no more paper submissions!

With **EDITSXpress**, public health insurance enrollers in New York City can submit applications to HRA *daily*—no more batched submissions, no more batched returns! Now you can create, submit, and track the status of applications in **EDITSXpress**, saving time and money.

EDITSXpress is offered by the Hudson Center for Health Equity & Quality (Hcheq), a certified submitter for NYC's Eligibility Data and Image Transfer System (EDITS)—which is the gateway to the Welfare Management System (WMS).

Feature Summary

EDITSXpress works with existing processes, is simple and efficient, and speeds revenue growth.

- Data entry screen to capture application information
- Required fields and text formats
- Scanning solution for supporting documentation
- Import data from other systems
- Export data to your core system
- View pending, sent, and returned applications via reports
- Resubmit returned applications the same day
- ASP Model or customer-hosted options are available

Fast-Track Your Revenue Stream

Through faster submissions, fewer errors, and reduced quality returns, **EDITSXpress** speeds time to enrollment by over 60 percent, delivering huge ROI.

Technical Requirements and Security Features

- Application server with Microsoft® .NET Framework 3.5
- Microsoft® SQL Server® 2005
- Sheet-fed scanner for high speed scanning
- EDITS transactions are transmitted via secure FTP

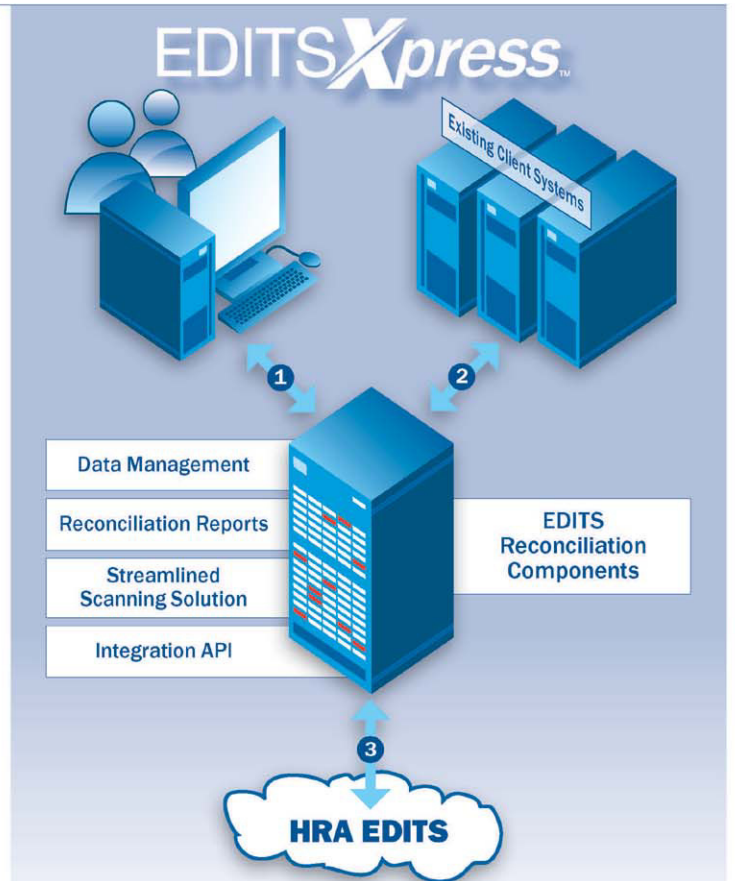

Pricing

Health Plan and CBO pricing options are available.

Maintenance and Support

Hcheq ensures ongoing compliance with HRA and WMS file formats and updates. **EDITSXpress** is ADM compliant.

Contact: Sherri Ehrlich at 914.372.2101 or sherri.ehrlich@hcheq.org.

- 1 Hcheq's **EDITSXpress** web interface allows for managing application, data, and images. A suite of reports is available, supplying all data needed for streamlined reconciliation of applications transmitted to EDITS.
- 2 A Web Service API is available for building custom integration points to push and/or pull data from the **EDITSXpress** system.
- 3 **EDITSXpress** is responsible for the creation and reconciliation of raw EDITS files. This data is then delivered to the submitter in well-formatted data streams or via the detailed reports.
